# Erdheim-Chester Disease **AWARENESS WEEK**

**SEPTEMBER 7- 12 , 2020**

---

- A life-threatening, rare blood cancer (histiocytic neoplasm) that is indicated as underdiagnosed.
- Diagnosed via biopsy, scans and clinical symptoms.
- Variable symptoms may include bone pain, bulging eyes, balance issues, excessive thirst, shortness of breath, fatigue, and/or night sweats.
- Most commonly affects adults, but can present at any age.
- Targeted treatments available.
- Fewer than 1,000 cases known worldwide.
